
Supplementary Material

Manuscript: Neural correlates of ideomotor effect anticipations

Authors: Roland Pfister, Tobias Melcher, Andrea Kiesel, Peter Dechent, Oliver Gruber

Supplementary Figure 1: Interactive 3D model of the main contrast “endogenous vs. exogenous selection”

Interactive 3D-model of the contrast endogenous > exogenous (blue) and exogenous > endogenous (orange), thresholded at $p < .001$, uncorrected, and a minimum of $k = 20$ contiguously activated voxels.
