

Supplementary Material for:

Flexible weighting of body-related effects in action production

Guillaume Thébault, Roland Pfister,, Arthur-Henri Michalland, Denis Brouillet

Response Times (RT1 and RT2 in ms), and error rates (PE, percentage of error in %) as a function of response type (soft vs. forceful) and vibration intensity of the following effect (low vs. high). Error bars represent standard errors of paired differences for the comparison of low- and high-intensity vibrations (Pfister & Janczyk, 2013).
